

BARN CATS AVAILABLE

Ideal for stables, barns and large back yards.

Environmentally-friendly pest control & helping homeless cats all-in-one

We have healthy, sterilized community cats in need of outdoor homes! A community is a cat that has been fully vetted then released back into the area from which it was captured. They are the unowned stray and feral (unsocialized) cats who live outdoors in our neighborhoods with or without a particular home or caretaker. On occasion, some cats cannot remain in their neighborhood due to safety concerns or they have been displaced. In these situations we need an outdoor setting to rehome these cats.

All IndyFeral cats have received vet care (sterilization, vaccinations, and exam, etc.), and are ear-tipped to easily identify them as a neutered community cat. You just need to provide daily food and water, protection from the elements, and long-term vet care.

Barn cats help keep rodents away from grain and food storage areas, and you get the satisfaction of giving them a much-needed home. If you own or manage property and have permission for long-term placement of animals on the property, please call us!
